

Polar Point of Sale

Expand your Horizons

Polar POS is at the leading edge of point of sale technology

Over years that we have worked with other point of sale systems we have noticed many short comings and issues that customers were having when using them. Annual fees, upgrade fees, unreliable features, lack of support for the point of sale system and others. We have decided instead to develop a new point of sale system that is actual designed and maintained by the very users of that software. We constantly ask our customers what would they like to see in a pos system and the result was Polar point of sale.

Reach your customers

Reaching your customers and potential customers is very important for a business and it is also a very time consuming job, but with Polar point of sale you can focus your time more on reaching your customers while Polar point of sale helps in cutting down time wasted on tedious tasks such as price changes and employee records and maintenance while also allowing preferred customer loyalty programs to

be introduced, gift card programs and more. So why not reach your customers today and see your sales grow?

Secure your business

Without Polar point of sale your business is vulnerable as most other point of sale solutions do not have the security features that Polar POS does such as biometric integration, cash drawer inspector and video surveillance integration. Individuals coming into your store can be security issues as some will try to pass off fake checks, prevent this with Polar POS biometric reader that will securely and accurately store the finger prints of any customer that passes on a check and utilize our instant check validation service which will scan and validate if the check is real or not. No other point of sale solution offers such powerful features.

Another big issue for store owners is employee theft, one way to curb that is through Cash drawer inspector a feature that will calculate how much money should be in each drawer and see if that employee has been stealing.

Passwords are necessary but bothersome, many people forget those passwords which causes even more problems. So what to do? No password is unsecure and causes problems and forgotten passwords are a problem? Well with Polar point of sale you have the solution, biometric login. So now instead of logging in securely using a password login using your finger!

Remote Management

Can't be at the store all the time but in order to become a good store owner and have a successful business one must constantly maintain control over what is going on. Unfortunately no other point of sale system has such capabilities, all except for Polar POS. It is the only point of sale system that allows remote

management capabilities, so manage the store, take reports, change prices, view statistics and more from any location.

Understand your business

With our system greater information about the business will become known, the trends and the suggested actions to be taken, while significantly cutting down on waste and saving employee time allowing the store to become more efficient and quicker in regards to work. Get more accomplished in a single day with Polar Point of Sale than any other system. Ensure the trust into one of the most reliable systems in the industry.

No blackouts No headaches

Employing cloud based technology, Polar Point of Sale increases data redundancy and eliminates the possibility of data loss. What other point of sale system can provide such a protection in regards to the data? All other systems will fail and stop

functioning if one station goes down or if the server goes down but not with Polar Point of Sale.

Security at its peak

Ensure your business' security with Polar POS. We have certified our pos system with PA-DSS requirements so that all credit card and debit card transactions go through the most secure and reliable method.

National Weights and Measures Certified

Is your point of sale system certified with the National Weights and Measures? If not it would mean you can face extreme hassles as your point of sale vendor will be forced by federal law to disconnect your scale and point of sale system. The federal government requires that all point of sale software are certified to read the connected scales properly and failure to do so may result in fines and down time but not with Polar Point of Sale.

Dual Interval

This is one the most exciting features we have introduced yet. It is the dual interval feature and it is something that many have not heard of but will be loved by all. It is one of the most significant feature of a point of sale system and it only comes with Polar Point of Sale. This feature quite literally allows you to

save money! Polar Point of Sale is capable of reading more accurately than any other point of sale system in the market. With Polar POS it reads up to a third decimal point such as 00.000 instead of the regular 00.00 two decimals. That way you do not give away your product for free.
